

MICROBEBIO: FEEDING THE DOMINICAN REPUBLIC WITH THE POWER OF MICROBES

MICROBEBIO: FEEDING THE DOMINICAN REPUBLIC WITH THE POWER OF MICROBES

Producing more food with fewer resources may sound too good to be true, but the solution is already beneath our feet.

Farmers in the Dominican Republic have trillions of tiny allies ready to transform their fields.

Those allies are microbes.

At Microbebio, we help farmers grow more, grow better, and grow sustainably not by adding more chemicals, but by working with nature's microbial power.

WHY MICROBEBIO? A SOIL-FIRST SOLUTION FOR THE DOMINICAN REPUBLIC'S TOP CROPS

Farmers across the Dominican Republic face serious challenges:

- Soil degradation from chemical overuse
- Climate change impacting yields and water supplies
- Pest and disease outbreaks reducing crop quality

Microbebio provides natural, microbial-based solutions to restore soil health, increase productivity, and protect the environment.

Our formulas are carefully developed and field-tested to support the region's key crops: rice, banana, plantain, citrus, and coffee.

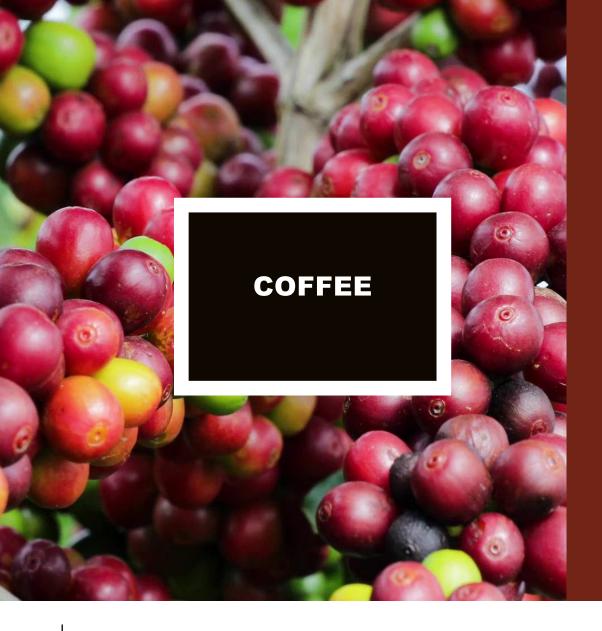

- Improve grain yield, aroma, and taste.
- Enhance straw decomposition for better soil cycling.
- Increase resistance to golden apple
 Improve root zone microbial activity for stronger, healthier plants.

- Support faster growth and stronger stems.
- Enhance fruit quality, size, and natural aroma.
- Build resistance against
 Panama disease, nematodes,
 and fungal attacks.
- Improve water retention to reduce irrigation needs.

- Boost fruit aroma, flavor, and shelf life.
- Improve resistance to root rot and citrus greening.
- Strengthen root systems for nutrient efficiency.
- Reduce the need for chemical fungicides and pesticides.

- Enhance bean size, aroma, and taste.
- Protect against coffee rust and root diseases.
- Improve soil biodiversity for long-term productivity.
- Increase drought tolerance through better water management.

HIGHER YIELDS WITH FEWER INPUTS

Microbebio's microbes unlock nutrients and improve fertilizer efficiency, reducing chemical costs.

HEALTHIER SOILS FOR FUTURE GENERATIONS

We help farmers rebuild their soil with natural microbial cycles that promote long-term soil fertility.

LESS WATER, LESS WASTE

Our microbial solutions improve soil water retention,

helping farmers save water and thrive during dry seasons.

NATURAL PEST & DISEASE PROTECTION

Microbebio strengthens plants from the inside out, reducing the need for chemical treatments.

BETTER FLAVOR, AROMA, AND SHELF LIFE

Stronger plants produce better-tasting, longer-lasting crops that meet market demands.

- Proven in local fields, from rice paddies to mountain coffee farms.
- Easy to apply, compatible with existing farming systems.
- Scientifically validated and environmentally friendly.

Microbebio is more than a product—it's a partner in sustainable farming.

JOIN THE MICROBIAL FARMING MOVEMENT

Farmers in the Dominican Republic are turning to Microbebio for a simple reason: It works.

With Microbebio, you don't just grow crops—you grow healthier soils, higher profits, and a better future.

GROW SOIL - GROW LIFE. GROW WITH MICROBEBIO.
